# Citizen DAO

Internet native, self-sovereign digital organizations

Blockchain governance tools
made for blockchain natives

- Snapshot + Safe
- Snapshot + oSnap + Safe
- Wallets, signing, nonces

Existing DAOs with a legal entity

are "hacky" from a legal standpoint

- incorporate in a foreign country (Switzerland, Marshall Islands, ...)
- use local legal entities of members to enter into off-chain agreements (rent, subscriptions, bank accounts)
Citizen DAO

A digital organization run democratically by its members onto which you can attach an "analog" organization
Core concepts

people + multi-sig

digital organization

Core concepts

people   +   multi-sig   (+)   entity

|———————————— digital organization ————————————| |——— analog organization ———|

How it works

votes = signatures

decide in a way that reflects your actual structure
How it works

wallet
or
email

allow people to focus on the end goal, not fight the tech

How it works

proposals = transactions
work in a way that feels natural

\+

members = organization

Hold assets
Make proposals
Update org structure

members

delegate = member

Make proposals
Execute proposals
On behalf of members
Cannot change the org
structure

# delegates

members + delegates

Democratic

Structure is a direct reflection
of membership

Decisions have the capacity
to execute

**digital
organization**

buy something online
sign a grant application

hire someone

statutes

How it works

interact with the old world

attach an analog organization to your digital one
