# Citizen DAO

Internet native, self-sovereign digital organizations

Blockchain governance tools

made for blockchain natives

- Snapshot + Safe
- Snapshot + oSnap + Safe
- Wallets, signing, nonces

Existing DAOs with a legal entity

are "hacky" from a legal standpoint

- incorporate in a foreign country (Switzerland, Marshall Islands, ...)
- use local legal entities of members to enter into off-chain agreements (rent, subscriptions, bank accounts)
Citizen DAO

A digital organization run democratically by its members onto which you can attach an analog organization
votes = signatures

decide in a way that reflects your actual structure

wallet
or
email

allow people to focus on the end goal, not the tech

proposals = transactions
work in a way that feels natural

members = organization

Hold assets

Make proposals
Update org structure

members

delegate = member

Make proposals
Execute proposals
On behalf of members
Cannot change the org
structure

**delegates**

members + delegates

Democratic

Structure is a direct reflection
of membership

Decisions have the capacity
to execute

**digital
organization**

buy something online
sign a grant application

hire someone
